

Technical advice from a team of experts

# Removing vinyl

Pieces Détachées Automobiles

Installation and Photo  
 « Atelier Majuscule »

## WHAT TECHNIQUES CAN BE USED TO REMOVE VINYL?

Here are some examples to make the task easier and save your time when you want to remove vinyl. Depending on the substrate on which the self-adhesive film has been applied, the technique and accessories used will differ.

### TIP

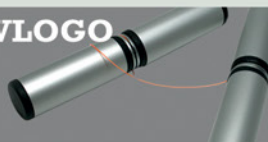

#### How to prevent glue residues on the substrate?

When you pull on the film to remove it, reduce to as little as possible the traction angle of the vinyl towards the substrate.

## HOW TO REMOVE A LOGO FROM A VEHICLE?

### CASE N°1

#### REMOVLOGO

Use **REMOVLOGO** in a top-to-bottom movement to remove the logo from the vehicle without damaging the bodywork.

#### VINYL ZAPPER

Without forcing, apply **VINYL ZAPPER** to the bodywork so as to remove any glue residues. Thanks to its soft rubber roller, remove any vinyl in just a few seconds, even if it is old or brittle.

#### REMOVER

Cleaning fluid

The **REMOVER** is a cleaning fluid that allows you to remove final glue residues on the vehicle.

This method allows you to avoid the risk of potentially scratching the vehicle when using a cutter

## HOW TO REMOVE CUT-OUT LETTERS FROM THE BODYWORK OF A VEHICLE?

### CASE N°2

#### PISTHERMIQ

Steinel® hot air gun

Heat the cut-out letters with the **PISTHERMIQ** at 40-45° to make the letters easier-to-remove.

#### REMOVER

Cleaning fluid

If any traces of adhesive remain, use **REMOVER** fluid to remove them.

Remember that top-of-the-range films such as polymeric or cast films will always be easier-to-remove in time than a monomeric film

## HOW TO REMOVE CUT-OUT LETTERS FROM A WINDOW?

CASE N°3

Solution of water  
mixed with a few  
drops of soap with  
a neutral pH

Moisten the glass surface by spraying on it a solution of water mixed with a pH-neutral soap to prevent scratches on the window.

**GRATLAM100**

Scrape the cut-out letters with the **GRATLAM100** to remove them.

This technique allows you  
to minimise the time spent on this task

## HOW TO REMOVE STRIPES SUCH AS REFLECTIVE STRIPES?

CASE N°4

**PISTHERMIQ**

Steinel® hot air gun

"Chevrons" are used as signage on emergency vehicles on which the films must have very high resistance.

Heat with the **PISTHERMIQ** at 40-45° and remove the reflective stripes very slowly to leave as little adhesive on the bodywork as possible.

**REMOVER**

Cleaning fluid

Remove any glue residues with **REMOVER**; leave it for a few seconds and then wipe gently with the red microfibre cloth.

**FINAL CLEANER**

For a perfect finish, you can use **FINAL CLEANER** with the green microfibre cloth.

Use **MFKIT** microfibre cloths, respecting their colours in relation to the 1-2-3 application and removal fluids, not to mix up the fluids

**MFKIT Red**  
REMOVER

**MFKIT Yellow**  
PRE CLEANER

**MFKIT Green**  
FINAL CLEANER
